

In high school, I joined the Engineering Club and invested my time designing and building a robot that had constraints for the competition. I was awarded third place for the robot and showed how much support I can get by working with peers. I feel passionate about joining the Engineering Honors Program offered by Texas A&M University because I want to showcase my skills in pursuing Aerospace Engineering and collaborate with high-achieving students to solve challenges presented in the real world. The ability to engage in Engineering Research would be an opportunity to show job employers that I can project innovative products to favor my clientele. Interacting with the honors faculty will help me be an eminent leader and guide future honor students to be successful captains. This year, I'm a freshman and very interested in exploring what the college offers to succeed.

My undergraduate studies' goals are to succeed in my Engineering and Core Classes for reaching an outstanding GPA to get accepted into Aerospace and gain my confidence and street-smartness by consulting with other A&M comrades in special activities and network opportunities to earn recognition. I intend to walk out of the university with a bachelor's degree in my hand and show my understanding in the Aerospace field leading to working with a team of professionals. The university's internship programs could help me further my interest in Aerospace and Engineering in general. For my post-graduation goals, first, I'm seeking a Master's degree in the same field or learn Mechanical, Industrial, or Electrical Engineering. Then, I feel assertive about obtaining a PH.D degree because I am obsessed with researching and developing a project to satisfy the population. This post career can help me rise to a professional Engineer in the Engineering Industry and aim for skilled jobs offered in Aerospace.

An exceptional circumstance that will affect my Engineering Honor Application is my GPA that I currently acquire right now. My GPA for Texas A&M is a 3.4, but that's because I have taken only five credit hours (3 hours of U.S History and 2 hours of Engineering), which didn't provide that much weight for this Fall Semester of 2020. However, I have taken my Core Classes for General Engineering at the Blinn-Rellis Campus and received a 4.00 GPA. I am concerned about whether the honors committee will average my A&M and Blinn GPA to get accepted into the Honors Program. Another unique circumstance that I feel bothered by in this application is the employment opportunities in my resume. I only worked for one job (Instacart), but applied for other jobs and never hired me to work. I have the courage to express my street-smartness to many people I have never met before.
